WRITTEN BY SUSHMA MA'AM

Child Specialist Educator & Child Psychology Expert

An educational graphic novel about the Internet, Algorithms, AI and Cyber Safety

AUTHOR

LEVEL UP AI: DEFEAT THE GLITCH KING

An Educational Graphic Novel • Ages 8–14

Written by **Sushma Ma'am**

Child Specialist Educator & Child Psychology Expert

© 2026 Sushma Ma'am. All rights reserved.

No part of this book may be reproduced without permission, except the Certificate of Mastery (page 99), which may be printed for personal and classroom use.

All characters, companies, websites and events in this story are fictional. Web addresses such as "glitchgames.com" and "cloudfortress.net" are made up for teaching. Technical facts are simplified for young readers and reflect common knowledge as of 2026.

♥ DEDICATION ♥

For every curious child who has ever asked
"But HOW does it work?"

And for the parents and teachers who stop,
smile, and help them find out.

— **Sushma Ma'am**

AUTHOR'S NOTE: DIGITAL WELLBEING

SUSHMA MA'AM

Child Specialist Educator &
Child Psychology Expert

In the story, she appears as
her digital avatar — the Guild
Master of the Net.

Dear young explorer, and dear grown-ups reading along —

Children today are born into a world of screens, games, apps and AI. Technology is not good or bad by itself; what matters is **how** we understand it and **how** we use it. In my years working with children, I have seen that curious minds learn best through stories, pictures and play — so this book turns tricky ideas like routers, algorithms and neural networks into a game.

Along the way you will also meet **Psychology Power-Ups**: small, science-based habits for balance, calm and safety. Every page ends with a **HUD Tip** from me. Read them aloud, talk about them at dinner, and try them out.

Remember: you never have to face anything online alone. Asking a trusted adult for help is not weakness — it is the smartest power-up of all.

LEARN

Tech ideas explained with
gaming analogies and
blueprints.

FEEL

Psychology Power-Ups for
calm, focus and balance.

PROTECT

Safety habits every young
explorer needs.

SHARE

Read together — every tip
is a conversation starter.

ABOUT THE AUTHOR

Sushma Ma'am is a Child Specialist Educator and Child Psychology Expert. Her work focuses on helping children become curious, confident and safe learners — using stories, play and positive psychology instead of fear. In *LEVEL UP AI* she brings that approach to the digital world, turning technology lessons into a game that children *want* to play and families can enjoy together.

**★ SUSHMA MA'AM'S HUD TIP**

Every hero has strengths AND things to work on — just like you! Which character are you most like? Which skill would you like to level up?

WORLD MAP: THE 6 SERVER REALMS

★ SUSHMA MA'AM'S HUD TIP

Maps help your brain see the BIG picture before the details. Glance back at this map whenever you finish a level!

★ SUSHMA MA'AM'S HUD TIP

Every realm teaches one big idea. Learning in levels — small wins, then a boss — is exactly how brains love to grow!

Saturday, 7:59 PM. Leo "Pixel" is one corner away from glory...

Final lap of the Galaxy Kart Championship! One more turn and the trophy is MINE!

Go, Pixel, go! Speed: 100%! Snacks: 0%!

VROOOOM!

NOOO! The screen FROZE!

FZZT!

CONNECTION LOST?!
Glitchy, did you unplug something again?

Negative! I only unplugged... the toaster. And the lamp. And maybe the fridge?

Maya "Code-Byte" rushes in from next door, tablet in hand.

Pixel! My video call dropped too — and my homework upload just vanished!

It's not just me... something bigger is happening.

★ **SUSHMA MA'AM'S HUD TIP**

When something goes wrong online, pause and take 3 slow breaths. A calm brain solves problems faster than a panicked one!

GREETINGS, tiny gamers! I am the GLITCH KING — ruler of lag, lord of broken links!

KRZZZT!

He hacked the TV AND my tablet?!

ERROR 404: Bravery not found!

GG!

I have swallowed your DATA PACKETS!
Soon every game, video and message on
the Global Net Hub will CRASH!

The screen fizzles to black.

Born from spam, bad data and rumours
nobody checked... I grow stronger every
time someone shares without thinking! HA-
HA-HA!

BLIP.

★ **SUSHMA MA'AM'S HUD TIP**

Scary pop-ups and messages are designed to make you panic. Never click anything while you feel rushed — tell a trusted adult first!

The router lights swirl — and a glowing figure steps out!

Don't worry, young explorers. I am Sushma Ma'am — Guild Master of the Net.

A teacher... made of LIGHT?!

GG!

The Glitch King is a rogue bug.
He hides in six Server Realms.
To stop him, you need
KNOWLEDGE power-ups.

Power-ups?! I LOVE power-ups!

Then let's SPEEDRUN it! Skip
the tutorial!

Speed is a great skill, Pixel. But
real pros check the safety
settings FIRST.

SAFETY CHECK ✓ Trusted adult informed.

MOM! Sushma Ma'am is teaching us how the internet works — can we go?

PIXEL'S MOM

Okay! Stay together and be back for dinner at 8:30!

GG!

★ SUSHMA MA'AM'S HUD TIP

Before any online adventure, tell a trusted grown-up what you are doing. Real heroes always have a support team!

Level 1 begins! The team dives into the router.

CANNONBALL!

Wheeeeeee – wait, I can't swim!

WHOOOSH!

Whoa! A highway made of light waves!

It's like the rainbow road in Galaxy Kart!

This is the WI-FI HIGHWAY. Your console sends data as radio waves to the router. The router sends it on through the modem to your Internet Service Provider.

HOME NETWORK MAP

So Wi-Fi is... magic air?

Not magic — radio waves! Same family as the waves that carry FM radio, just a different frequency.

★ SUSHMA MA'AM'S HUD TIP

Wi-Fi is invisible radio waves carrying data. Walls, distance and microwaves can weaken the signal — sit closer to the router for a steadier game!

By the roadside, tiny envelope creatures are shivering.

We're lost! We were carrying Pixel's game moves to the game server!

Tiny envelopes? THOSE are my game moves?

They're DATA PACKETS! Every file online gets chopped into small pieces like these.

Each packet carries a number and an address. They can take different roads and still arrive — the receiving computer puts them back in order!

DATA PACKETS: BIG FILE → SMALL NUMBERED PIECES

Your file

#1

#2

#3

#4

REASSEMBLED
in order

#1 #2 #3 #4

✓ Photo!

Each packet may take a different road!

Hello, little packet #3! I will call you... Kevin.

My name is 01101011.

BEEP!

★ **SUSHMA MA'AM'S HUD TIP**

Big things are easier when broken into small steps — just like the internet breaks big files into small packets!

Maya inspects the packet like a detective.

Look at the label on this packet: "To: 192.168.1.7". That's a number, not a name.

I know! IP means... Ice-cream Party!

Ha! I wish!

IP stands for INTERNET PROTOCOL. An IP address is like a house address, so packets know exactly where to go.

IP ADDRESS = YOUR DEVICE'S HOME ADDRESS

Laptop
192.168.1.7

Phone
192.168.1.8

Console
192.168.1.9

Router 192.168.1.1

Internet sees:
Public IP
203.0.113.42

So the router gives each gadget at home its own address...

...and sends everything out to the world using ONE public address.
Clever!

★ SUSHMA MA'AM'S HUD TIP

Your home address is private — and so is your device's location. Never share where you live with strangers online.

Pixel peeks inside Kevin the packet...

What's actually *INSIDE* a packet? Tiny words?

Just 0s and 1s! Computers use BINARY — switches that are OFF (0) or ON (1).

BINARY: COMPUTERS TALK IN 0s AND 1s

64 + 1 = 65 → the letter "A"

8 switches (bits) = 1 byte

01001000 01101001! That means "Hi" in binary! Did I do it right?!

Every photo, song and game is made of millions of these bits.

My whole game is just... LIGHT SWITCHES?!

★ SUSHMA MA'AM'S HUD TIP

Your brain learns best in small chunks. Try learning one new tech word a day — by the end of the month you'll know 30!

We're going SO FAST!

We jumped into a fiber-optic cable — data here travels as pulses of LIGHT!

ZWOOOM!

The light zig-zags inside a glass thread thinner than a hair. Flash = 1, no flash = 0!

FIBER OPTICS: DATA AS FLASHES OF LIGHT

light bounces inside thin glass (total internal reflection)

light ON = 1 · light OFF = 0

Light is the fastest thing in the universe! I am riding a LASER!

Light slows down a little inside glass — but it still circles Earth about 5 times in one second!

Hold on, Kevin! Next stop: the Hardware Dungeon!

ZIP!

★ SUSHMA MA'AM'S HUD TIP

Amazement is good for learning! When something makes you go "WOW", your brain remembers it better.

The cable spits them out onto a giant circuit board.

We're INSIDE Pixel's game console! The chips look like skyscrapers!

THUD!

Glitch bugs guard the gates!

Bzzzt! No entry! This dungeon belongs to the Glitch King!

OUT OF MY WAY, BUGS!

CRASH!

Pixel, wait! They're just jamming the circuits. Let's learn how this machine works — then we'll know how to fix it.

Ugh... fine. Map first.

★ **SUSHMA MA'AM'S HUD TIP**

Rushing in without a plan causes mistakes. Pause, look, then act — that is how speedrunners really win!

BLUEPRINT: INSIDE YOUR COMPUTER

A computer works like a busy factory city – every building has a job!

WHEN YOU PRESS "START" ON A GAME...

- 1** SSD loads the game files
- 2** They move into RAM
- 3** CPU runs the game rules
- 4** GPU paints the picture
- 5** Screen shows it: 60x a second!

So my console is a whole CITY?!

And I live in the RAM district. Rent is cheap but I forget everything at night!

★ SUSHMA MA'AM'S HUD TIP

Your brain has "parts" too: a thinking part, a feeling part and a memory part. Sleep is when your brain "saves" the day's learning – like writing to storage!

The CPU — Central Processing Unit — is the command tower. It follows instructions, one after another, super fast.

How fast?

Billions of steps every second! Fetch an instruction, decode it, execute it — then repeat!

CPU LOOP: BILLIONS OF TIMES A SECOND

The CPU meter says 100%! The bugs are spamming it with junk instructions!

D!

Opening Task Manager... closing every program we don't need!

Junk deleted! CPU down to 35%! The tower can breathe again!

WHOOSH

★ SUSHMA MA'AM'S HUD TIP

Your brain also gets overloaded when you juggle too many things. Do one task at a time and you'll finish faster!

RAM VS STORAGE

- RAM = a busy WORKBENCH. Super fast, holds what you're using right NOW. Forgets everything when power turns off!
- STORAGE (SSD/hard drive) = a giant LIBRARY. Slower, but keeps your games, photos and saves even when switched off.
- More RAM = more things open at once without slowing down.

The RAM desk is buried! What IS all this stuff?

47 browser tabs, 3 music apps, and a video you paused... last Tuesday!

Pixel! Your game was fighting for desk space!

Okay... maybe I leave a LOT of stuff open.

Tabs closed! Desk cleared! RAM free: 60%!

The whole dungeon just got faster!

SWOOSH!

★ SUSHMA MA'AM'S HUD TIP

Your memory works like RAM too! Take short breaks while studying so your brain can "save" what you learned.

What's that glowing building full of tiny painters?

The GPU — Graphics Processing Unit! It paints every frame you see in the game.

GPU POWER

- A CPU has a few very smart workers.
- A GPU has THOUSANDS of simpler workers painting pixels all at once.
- 60 FPS = 60 new pictures (frames) every second!
- GPUs are also used to train AI — keep that in mind for Level 4!

If I had a GPU, I would paint 60 pictures of pizza every second.

CPU thinks, RAM remembers for now, storage remembers forever, GPU paints. Got it!

And the motherboard connects them all — like city roads!

★ SUSHMA MA'AM'S HUD TIP

Games look smooth because of many tiny steps done together. Teamwork works the same way — many helpers make big jobs easy!

At the exit, thousands of packets are stuck in a giant jam.

HONK! HONK! We've been waiting for HOURS!

NOBODY PASSES! EVERYONE... WAIT!

The router has turned into a MONSTER!

BANDWIDTH is how much data fits through at once — like the width of a road. The Glitch King is flooding this road with junk!

BANDWIDTH vs LATENCY

NARROW PIPE = low bandwidth → few packets at once

WIDE PIPE = high bandwidth → lots at once!

LATENCY (ping) = how LONG the trip takes, in milliseconds

Boosters loaded!

POWER-UP UNLOCKED: BANDWIDTH BOOSTERS

-  Pause big downloads & updates you don't need
-  Use a wired cable (Ethernet) — steadier than Wi-Fi
-  Move closer to the router
-  Restart the router: off → wait 30 s → on

★ SUSHMA MA'AM'S HUD TIP

When you feel stuck, ask: "What's the smallest thing I can fix first?" Big problems shrink one step at a time.

✕ BOSS BATTLE THE TRAFFIC JAM ROUTER

HP

DEFEATED!

I AM THE TRAFFIC JAM ROUTER! YOU SHALL NOT BUFFER!

I'll smash your antennas!

BOSS HP 70%

BOOSTER #1: pausing 12 background downloads! Road widening!

BOSS HP 40%

BOOSTER #2: plugging in the Ethernet cable — a private lane for my console!

Nice thinking, Pixel!

BOSS HP 0%

BOOSTER #3: RESTART! Power off... wait 30 seconds... power ON!

LEVEL 1 CLEAR!

The road is open! Thank you!

★ SUSHMA MA'AM'S HUD TIP

Winning isn't about smashing harder — it's about thinking smarter. Strategy beats panic every time!

★ **SUSHMA MA'AM'S HUD TIP**

Feeling proud after finishing something hard is your brain's reward. Celebrate small wins — they fuel the next challenge!

The route to the Cloud Fortress dives beneath the ocean.

We're... underwater?!

My warranty does NOT cover water!

SPLOOSH!

The internet between continents mostly travels through cables on the ocean floor!

UNDERSEA CABLES CARRY ~99% OF GLOBAL DATA

Thin as a garden hose • lying on the ocean floor • carrying light!

Hundreds of cables wrap around our planet. Some are longer than 20,000 kilometres!

And I thought satellites did everything.

Satellites help too — especially in remote places. But cables carry far more data, far faster.

Cables: 1. Satellites: 0. Fish: undecided.

★ **SUSHMA MA'AM'S HUD TIP**

Curiosity is a superpower. When something surprises you, ask "How does that work?" — that's how scientists think!

SHARK! It's going to bite the internet cable!

GULP!

Relax! Shark bites are super rare. Most cable damage comes from ship anchors and fishing nets.

Oh. Sorry, Mr. Shark.

CABLE FACTS

-  Cables near shore are armoured with steel and sometimes buried.
-  Signal boosters called REPEATERS sit along the cable to keep the light strong.
-  Special repair ships fix broken cables.
-  Many backup routes exist, so one broken cable rarely cuts off a country.

I detect land... er, CLOUDS... straight ahead!

SWOOSH!

★ SUSHMA MA'AM'S HUD TIP

Not every scary story is true! Before you believe something, check the facts — even about sharks.

Above the ocean, a castle floats among the clouds.

The CLOUD FORTRESS!

It's beautiful! Is it made of marshmallow?

The gates close in 10 minutes! Only those who know the EXACT address may enter! HA!

CLUNK!

Web addresses are called URLs. Each part has a job!

ANATOMY OF A URL (web address)

Always check the DOMAIN NAME before you click!

The domain name tells you WHO runs the site. The "https" and lock mean the connection is encrypted.

So I should always check the name part... got it.

★ SUSHMA MA'AM'S HUD TIP

Reading carefully is a hero skill. Slow down and look at every part of a web address before you click.

SYSTEM
GATE ACCESS: ENTER IP
NUMBER.

A number? We only know the
NAME: cloudfortress.net!

I shall become... THE PHONEBOOK!
Name in, number out!

DING!

Computers find each other with IP numbers. DNS — the Domain Name System — translates easy names into those numbers.

DNS: THE INTERNET'S PHONEBOOK

Answer (the IP address) comes back → your browser can connect!

DNS says: cloudfortress.net = 198.51.100.24!

The gate is opening!

★ SUSHMA MA'AM'S HUD TIP

It's okay not to know something! Asking the right helper — like DNS does — is a smart move, not a weak one.

Inside the gate: the twisting Data Maze.

A maze?! Which way?

The Glitch King swapped the signposts. Some point to FAKE sites!

This sign says "cloudfortress.net" — let's GO!

DASH!

STOP! Look closer — it says "c1oudfortress.net". That's the number 1, not the letter L!

Whoa... sneaky!

SPOT THE FAKE ADDRESS

- rn ↔ m: "glitchgarnes" vs "glitchgames"
- 1 ↔ l and 0 ↔ o: "g00gle", "c1oud"
- Extra words: "cloudfortress-login-free.win"
- When unsure: type the address yourself, or ask an adult.

★ SUSHMA MA'AM'S HUD TIP

Tricksters copy real names with tiny changes. Your super-sense: spelling! Read letter by letter when something feels off.

Rows and rows of blinking machines!

A real data center! This is where "the cloud" actually lives.

HUMMMM

DATA CENTER SECRETS

- 🖥️ Thousands of servers, running 24 hours a day
- ❄️ Huge cooling systems stop them overheating
- ⚡ Backup generators in case power fails
- 📦 Copies of your files kept in more than one place

FOUND IT! Pixel's save file — 3 copies, in 3 different places!

The King could only lock ONE of them. BACKUPS FOR THE WIN!

That's why companies copy data to different cities. If one breaks, the others survive.

Exactly. Never keep your treasure in one basket.

★ SUSHMA MA'AM'S HUD TIP

Backups aren't just for computers! Keep a copy of important school work — and a grown-up's help for important decisions.

A swarm blocks the exit.

Glitch bugs everywhere! They'll snatch the save file on the way out!

BZZZZZ

Then we ENCRYPT it! Encryption scrambles data so only someone with the right key can read it.

ENCRYPTION = SECRET CODE LOCK

"MEET AT 5"

X7#qPlz9@

"MEET AT 5"

Snoopers in the middle only see scrambled gibberish.

Look for <https://> in your browser bar.

Huh? "X7#qPlz9@"? We can't read this junk!

Ha! To them it's gibberish. To us it's my save game!

That's what the little lock in your browser means — the connection is encrypted.

★ SUSHMA MA'AM'S HUD TIP

Some things are meant to stay private — passwords, addresses, secrets. Private is not the same as bad; it's about keeping you safe.

Suddenly, everything moves in slow motion.

Why... is... everyone... talking... so... slow...?

LAG...

I... am... the... LAG... MONSTER... I... feed... on... DISTANCE... and... TRAFFIC...

SLURRRP

LATENCY — or "ping" — is how long data takes to make the trip. The farther and busier the route, the more lag!

PING TIME: CLOSER SERVER = LESS LAG

Server in your city

8 ms

Server in another country

70 ms

Server across the ocean

160 ms

Clogged / overloaded

400 ms

1000 ms = 1 second

My... jokes... are... taking... forever... to... load...

That's it. We need a plan to beat this slimy snail.

★ SUSHMA MA'AM'S HUD TIP

Waiting is hard! When a game lags, try a "patience breath": count 4 in, hold 4, count 4 out. It really helps.

BLUEPRINT: HOW A SEARCH TRAVELS THE WORLD

From your finger tap to the answer on screen — in as little as 0.02 seconds!

⚡ SPEED FACTS

A blink of your eye takes about 0.1–0.4 seconds. A search answered by a nearby server can be done in about 0.02 s (20 milliseconds) — far servers take longer. Times above are examples for a very fast route.

Nine steps, round the world, faster than a blink!

And if any step is slow — that's where lag comes from!

★ SUSHMA MA'AM'S HUD TIP

Search engines find pages — but YOU decide which results to trust. Look for well-known, reliable sources and ask an adult when unsure.

Wait! Big websites keep COPIES of popular stuff close to people. It's called a CDN!

A Content Delivery Network. Well remembered, Maya!

CDN = SAVE POINTS

- A popular video is copied to servers in many cities.
- You get it from the closest one — shorter trip, less lag!
- Like a game putting save points near every boss room.

So we route the Lag Monster's victims to the NEAREST server!

Shortcut unlocked!

But we need the TRUE addresses. The King scrambled every signpost in the maze.

Hmm. We need a real map...

★ SUSHMA MA'AM'S HUD TIP

Planning ahead reduces stress. Before a big test or game, make a mini-map of what you'll do first, second and third.

No time for maps! I'll just run through every path until I find it!

ZOOM!

Five minutes later...

...Why am I back at the start? For the FIFTH time?

BONK

Trying random paths is slow. Let's be systematic — check each turn and mark it.

She's right. Speed without direction is just... running in circles.

Sorry, team. Let's do it together.

Aww! Teamwork mode: ACTVATED!

★ **SUSHMA MA'AM'S HUD TIP**

Everyone makes mistakes when they rush. Saying "I was wrong, let's try again" is a sign of a strong mind.

The... more... you... wander... the...
BIGGER... I... GROW!

GLORP!

Here — the DNS MAP COORDINATES! A
trusted list linking every real name to its
real address.

With this, no fake signpost can trick us!

Verified addresses only! No more c1oud-with-a-one!

WHY TRUSTED DNS MATTERS

- Fake DNS answers can send you to fake sites that LOOK real.
- Your device, router or internet provider picks a DNS helper.
- Grown-ups can choose trusted, family-safe DNS settings at home.

★ SUSHMA MA'AM'S HUD TIP

You don't have to know everything — you need to know where to find TRUSTED answers.

The team huddles like pros before a boss fight.

Okay, team. Strategy time.

Step 1: true addresses. Step 2: nearest server. Step 3: clear the traffic.

BATTLE PLAN VS THE LAG MONSTER

- 1 Fix the ADDRESSES — use trusted DNS coordinates
- 2 Shorten the TRIP — use the nearest server (CDN)
- 3 Clear the ROAD — block junk traffic
- 4 Stay TOGETHER — no solo rushing!

And Step 4: tell the Lag Monster a joke so slow he falls asleep!

Come... closer... little... gamers...

Oh, we're coming. With a PLAN.

GRRR...

★ SUSHMA MA'AM'S HUD TIP

Breaking a big goal into steps is called "chunking". It makes anything feel possible!

✕ BOSS BATTLE THE LAG MONSTER

HP

DEFEATED!

I... will... make... every... video... BUFFER... FOREVER!

Not today! DNS Map Coordinates — ACTIVATE!

BOSS HP 60%

Fake signposts detected and deleted!
Every packet now has its TRUE address!

BOSS HP 20%

Route everyone to the NEAREST server —
the save point next door!

BOSS HP 0%

And clear the congestion — junk traffic,
BLOCKED!

LEVEL 2 CLEAR! My save
file is back!

Wait... what's that glowing
screen calling my name?

★ SUSHMA MA'AM'S HUD TIP

Great teams play to each other's strengths. Notice what YOU are good at — and what your friends are good at!

Level 3: the team is pulled through a portal into a roaring arena.

A stadium made of SCREENS!

The crowd is cheering! For us?!

ANNOUNCER

WELCOME, CHALLENGERS, TO THE ALGORITHM ARENA! Solve the puzzles – or be sorted forever!

Algorithms run almost everything online – your search results, your game matchmaking, even your video feed.

I use them every day... without knowing?

Maya keeps glancing back.

That glowing screen from before... it's still whispering my name. "Maya... just for you..."

★ SUSHMA MA'AM'S HUD TIP

Excitement and nerves feel almost the same in your body! Try telling yourself "I'm excited" before a challenge.

An ALGORITHM is simply a list of steps to solve a problem — like a recipe!

AN ALGORITHM IS A RECIPE OF STEPS

1. Take 2 slices of bread
2. Spread butter
3. Add cheese + tomato
4. Put slices together
5. Is it toasted? NO → toast 1 min
6. YES → Eat! 🍞

I will follow the sandwich algorithm! Step 2: "Spread butter"...

DONE! I spread butter... on the TABLE!

Glitchy! It didn't say WHERE!

That's the lesson — computers do EXACTLY what you tell them. So instructions must be super clear!

That's why programmers test and fix — it's called DEBUGGING.

★ SUSHMA MA'AM'S HUD TIP

Computers follow instructions EXACTLY. Humans can think, question and adapt — that's your special power!

ANNOUNCER

CHALLENGE 1! Sort these power crystals from smallest to biggest!

There are hundreds of them!

CLINK CLINK

Bubble Sort! Compare two neighbours — if they're in the wrong order, SWAP. Repeat until nothing swaps!

SORTING: BUBBLE SORT SWAPS NEIGHBOURS

Compare... swap... compare... swap... this is kind of satisfying!

Swap-a-doodle-doo!

SORTED!

Computers sort millions of things like this — contacts, scores, search results!

DING DING!

★ SUSHMA MA'AM'S HUD TIP

Organising your desk and bag is a sorting algorithm for real life — and it lowers stress!

ANNOUNCER

CHALLENGE 2! The key is in locker #37 out of 100. Fewest guesses wins!

I'll check 1, then 2, then 3...

TICK TOCK

Too slow! The lockers are sorted, so use BINARY SEARCH: check the middle, then throw away the wrong half!

FIND #37: LINEAR vs BINARY SEARCH

Linear: check one by one → up to 100 checks

Binary (sorted list): cut in half each time → max 7 checks!

50 — too big. 25 — too small. 37 — FOUND IT in 3 guesses!

My way would have taken 37 guesses!

CLICK!

Different algorithms, same problem — but one is MUCH faster. Choosing the right algorithm is a real superpower.

Maya, you're a genius!

★ SUSHMA MA'AM'S HUD TIP

Smart strategies save energy. When you study, work smarter, not just longer.

While the others celebrate, a glowing screen floats toward Maya.

"Top 10 Secret Easter Eggs — Recommended for YOU." Well... just ONE video.

One video becomes two... then five...

Ooh, "Top 20 Easter Eggs"! And "Top 50"!

In the shadows, something with one enormous eye is smiling.

Yesss... watch one more... and one more...
I know EXACTLY what you like...

...just... one... more...

SCROLL SCROLL SCROLL

★ **SUSHMA MA'AM'S HUD TIP**

Apps are designed to be hard to put down. That's not your fault — but noticing it is the first step to taking back control.

Maya? MAYA?! She was right here a second ago!

Scanning... she's been gone for TWO HOURS!

Inside the Infinite Feed, videos stack up forever.

I just opened it five minutes ago... didn't I?

MAYA'S SCREEN CLOCK

- 🕒 Minute 1: "Just one video."
- 🕒 Minute 20: "One more."
- 🕒 Minute 60: forgot to drink water
- 🕒 Minute 120: still scrolling, not even enjoying it

She's caught in the Infinite Scroll Loop — the Attention Monster's trap.

Then we're going in after her.

★ SUSHMA MA'AM'S HUD TIP

Time feels different on screens — it flies! A timer or clock you can see helps your brain keep track.

She is MINE! I study everything she clicks, likes and watches... and I give her MORE, forever!

SQUELCH!

Let her GO, you giant eyeball!

My sensors say he's a RECOMMENDATION ENGINE that the Glitch King made greedy!

Every minute she watches makes me STRONGER. Watch time is my FOOD!

So... the more we watch, the bigger he gets?!

Most recommendation systems are just helpful tools. This one was built to keep people watching — no matter what.

★ **SUSHMA MA'AM'S HUD TIP**

Your attention is valuable — apps and ads compete for it. You get to decide where it goes!

The app notices what I watch... and guesses what I'll want next.

WHY DID THE APP SHOW ME THIS?

You watched 3 kart videos

You liked a cat clip

Friends watched speedruns

SCORE
each video

YOUR FEED

1. Kart tricks 91
2. Cat karts 84
3. Speedrun 77
4. News 12

Recommendation systems collect signals — what you watch, how long, what you skip — and give each video a score.

The highest score goes to the top of your feed.

Like how the game shop shows me robot hats because I bought 14 robot hats!

But I only watched ONE easter-egg video... now it's ALL easter eggs.

It's a bubble! You only see more of the same.

★ SUSHMA MA'AM'S HUD TIP

Knowing HOW something works gives you power over it. You are not just a user — you are a thinker!

The feed spots Pixel's favourite game...

Hang on, Maya, I'm coming — ooh! "Galaxy Kart SECRET shortcuts"!

DING!

...just... one... more... shortcut...

BEEP BEEP BEEP! TIMER ALARM!
PIXEL, WAKE UP!

BRRRING!

Whoa! I almost got stuck too!

A timer beat the monster! Remember that!

★ **SUSHMA MA'AM'S HUD TIP**

If you notice yourself "zoning out" on a screen, stand up and stretch. Moving your body wakes your brain up!

BLUEPRINT: HOW RECOMMENDATION SYSTEMS FEED YOU

Input data → probability weighting → your personal feed

1 INPUT DATA

WATCH TIME

watched 95% of kart video

LIKES

liked 3 cat clips

SKIPS

skipped news after 2 s

SEARCHES

"easter eggs"

TIME & DEVICE

8 PM, tablet

2 PROBABILITY WEIGHTING

Real systems use millions of these little "if-then" questions and maths to guess what you'll click next.

CHANCE YOU'LL WATCH (score)

3 OUTPUT FEED

1. Kart secret shortcuts	score 91
2. Cat plays kart	score 84
3. Top 50 easter eggs	score 77
4. Science of rockets	score 41

4 FEEDBACK LOOP

What you do with the feed becomes NEW input data. Round and round it goes!

YOU CAN STEER THE ALGORITHM

Search for new topics · tap "Not interested" · follow learning channels
turn off autoplay · ask a grown-up to help reset watch history

So the feed isn't "what's best" — it's "what I'll probably click"!

Shhh! Don't tell everyone my secret recipe!

★ SUSHMA MA'AM'S HUD TIP

Feeds show more of what you already click, which can create a "bubble". Stay curious — search for something totally new each week!

I'm starting to see HOW it traps people.

Let's name the tricks. Named tricks lose their power.

ATTENTION TRAPS

- Infinite scroll — no bottom, no natural stopping point
- Autoplay — the next video starts before you decide
- Red notification dots — make you feel you MUST check
- Streaks — fear of losing something if you skip a day
- Surprise rewards — you never know when the next great video comes

So it's not that we're weak. The design is made to be sticky!

Sticky like jam. Not the good jam. Traffic jam.

★ SUSHMA MA'AM'S HUD TIP

Turning off notifications for games and videos is like closing the door to the Attention Monster. You can open it when YOU choose.

In coding, a loop with no stop condition is an INFINITE LOOP — a classic bug!

LOOPS NEED AN EXIT DOOR

while true:
show next video

⊞ INFINITE LOOP

while timer < 20 min:
show next video
then STOP 🖐️

EXIT

✓ LOOP WITH A LIMIT

Then we give the loop an EXIT! A timer!

Exactly. TIMER LOGIC: decide your limit BEFORE you start, not in the middle.

Because in the middle, the monster is talking!

A TIMER?! No! Nobody sets a timer! Watch... watch...

HISSS!

★ SUSHMA MA'AM'S HUD TIP

Good habits are like good code: they have a clear start, clear steps and a clear STOP.

Why do I feel... tired? And kind of grumpy? I'm not even enjoying this anymore.

I haven't talked to anyone. I haven't moved.
My eyes hurt.

MAYA! It's me! Grab my hand!

Pixel?! How long have I been here?

GRAB!

I tried to stop but it kept saying "one more".

It said that to me too. It's okay — we'll beat it together.

★ **SUSHMA MA'AM'S HUD TIP**

Listen to your feelings: bored, tired, grumpy? Those are signals from your brain that it's time for a break.

Sushma Ma'am arrives in a burst of light.

SHIIII

Maya, what you felt has a name. Let me show you what's happening in your brain.

Your brain releases a chemical called DOPAMINE when it expects a reward. It makes you want MORE.

THE "ONE MORE" LOOP

So each new video feels like opening a mystery box.

Like loot boxes in games!

Exactly. Dopamine isn't bad — it helps you learn and try new things. We just need balance. Here's your Psychology Power-Up...

★ SUSHMA MA'AM'S HUD TIP

Your brain loves surprises and rewards — that's normal and healthy! The trick is choosing WHICH rewards get your time.

PSYCHOLOGY POWER-UP

Special Section by Sushma Ma'am • Balancing Screen Time & Dopamine Loops

THE DOPAMINE LOOP

WHAT IS DOPAMINE?

Dopamine is a messenger chemical in your brain. It rises when your brain *expects* something good — like a new video, a like, or a loot box. It helps you learn and chase goals! But apps with endless surprises keep the "maybe the next one is better!" feeling going, so it's hard to stop.

The good news: you can train your brain. Every time you pause and choose, the thinking part of your brain (the prefrontal cortex) gets stronger — like levelling up a skill tree.

SCREEN-TIME TRAFFIC LIGHT

GREEN – GO

Creating, learning, coding, video-calling family

YELLOW – WITH A TIMER

Watching videos & gaming just for fun

RED – STOP & TALK

Late at night, in secret, or when it makes you feel bad

MY BALANCED DAY PLATE

- Sleep
- School & study
- Play & move
- Family & friends
- Screens for fun
- Meals & chores

An example only — every family's plate looks different!

⚡ 6 BRAIN BREAKS

- 🦋 Do 10 star-jumps
- 💧 Drink a glass of water
- 👁️ 20-20-20 eye rule
- 🌳 Look out of a window or step outside
- 🗣️ Tell someone about your day
- 🎨 Draw what you just watched

🤔 ASK YOURSELF

- Am I still ENJOYING this?
- Did I CHOOSE this, or did autoplay?
- How does my BODY feel — eyes, neck, mood?
- What did I plan to do NEXT?

👨👩👧👦 FAMILY DEAL

Make screen rules together: when, where and how long. Screens off about an hour before bed and out of the bedroom at night help your brain sleep deeply.

Noticing the loop is how I escaped it!

Screens are like candy — great in the right amount!

★ SUSHMA MA'AM'S HUD TIP

There is no "perfect" number of minutes for everyone. The best screen time is time you CHOSE, ENJOYED, and could STOP when you needed to.

Maya uses her Power-Up.

I NOTICE I've been scrolling for 2 hours. I
NAME the feeling: stuck. I CHOOSE to
stop.

What?! My tentacle! She... she's making
her own choice!

THE 20-20-20 EYE RULE

- Every 20 minutes of screen time...
- look at something 20 feet (about 6 m) away...
- for 20 seconds.
- Your eye muscles relax — and so does your brain!

It's working! The feed is slowing down!

Monster power dropping!

★ SUSHMA MA'AM'S HUD TIP

When you name a feeling — "I feel stuck" — you calm the emotional part of your brain and wake up the thinking part.

Back in the arena, the team builds a weapon out of code.

Let's write the escape code — TIMER LOGIC!

Keyboard ready! Snacks... still 0%.

TIMER LOGIC V1.0

- SET limit = 30 minutes
- START timer
- WHILE timer < limit: enjoy videos
- IF timer ≥ limit: STOP 🖐️
- THEN: stretch, drink water, talk to a human 😊

Can we add: "IF homework not done THEN no autoplay"?

Great rule, Pixel. You're designing your own algorithm!

TIMER LOGIC – COMPILED!

POWER-UP ⭐

★ SUSHMA MA'AM'S HUD TIP

Setting a limit before you start is a gift to your future self. "Future me" will say thank you!

You can't escape AUTOPLAY! Next video in 3... 2... 1...

3... 2... 1...

Autoplay — OFF!

CLICK!

Notifications for games and videos — MUTED! Red dots — GONE!

POP POP POP!

Now the app waits for ME to choose, instead of choosing for me!

That's the difference between USING a tool and being USED by it.

★ **SUSHMA MA'AM'S HUD TIP**

You are allowed to change settings to protect your time. Ask a grown-up to help you set limits you both agree on.

ENOUGH! I will join EVERY screen in the arena and become the INFINITE SCROLL LOOP!

GLOOOORP!

The whole arena is one giant feed!

Then we break the loop for good — with Timer Logic!

Remember — you don't need to beat technology. You need to be the one in CONTROL of it.

Team, ready?

Timer set. Let's GO!

READY!

★ **SUSHMA MA'AM'S HUD TIP**

Big feelings can feel huge — like a giant monster. Breathe, stay with your team, and take it one step at a time.

× BOSS BATTLE THE INFINITE SCROLL LOOP

HP

DEFEATED!

SCROLL FOREVER! There is NO bottom!

Every loop has an exit! Timer Logic — EXECUTE!

ZAP!

BOSS HP 60%

Timer at 30 minutes! Limit reached! STOP command sent!

BEEP!

BOSS HP 20%

Autoplay OFF! Notifications OFF! Infinite scroll... PAUSED!

CLICK CLICK!

BOSS HP 0%

And now... I'm going OUTSIDE to play!

KA-POW!

LEVEL 3 CLEAR!

Look! A prize: "Official System Upgrade 2.0" — for ME?!

★ SUSHMA MA'AM'S HUD TIP

Screen time isn't the enemy — mindless screen time is. Choose, enjoy, then stop. That's the balanced gamer way!

Can I install it? Pleeeease?

Let me check first... Official source: the Neural Network Lab. Digital signature: verified. Okay — go ahead!

INSTALLING... AI MODULE... 100%!

WHIRRRR!

Level 4: The team arrives at the AI Brain Lab.

I can SEE things now! I recognise objects!
That is... a delicious LOAF OF BREAD!

Glitchy... that's a CAT.

Your new AI brain is confused! Something went wrong with its training.

★ **SUSHMA MA'AM'S HUD TIP**

Before installing anything, check it comes from an official source — and ask a grown-up. Free "upgrades" can hide nasty surprises.

Welcome to the AI Brain Lab! First question: what IS artificial intelligence?

Robots that take over the world?

AI IN ONE MINUTE

- 🤖 Artificial Intelligence = computer systems that do tasks that usually need human thinking.
- 👁️ Recognising: faces, voices, cats (hopefully!)
- 🌐 Predicting: the next word, tomorrow's weather
- 🎨 Generating: new text, images, music
- ! AI is not alive, has no feelings, and can make mistakes.

So I am not alive? ...But I feel HUNGRY for bread.

That's just a funny bug, Glitchy!

Voice assistants, photo filters, game enemies, spam filters — you already use AI every day.

Whoa. It's everywhere!

★ SUSHMA MA'AM'S HUD TIP

AI is a tool made by people. It's amazing — but YOU are the one with feelings, values and common sense.

Old-style programs follow rules humans wrote. Machine learning finds its OWN rules from examples!

OLD WAY vs MACHINE LEARNING

TRADITIONAL CODE

Rules + Data

→ Answers

humans write every rule

MACHINE LEARNING

Data + Answers

→ Rules (a model)

computer finds the pattern

Try writing rules for "cat": pointy ears... but foxes have pointy ears. Fur... dogs have fur. Ugh!

Exactly! Some things are too tricky for rules. So we show the computer thousands of examples instead.

Like how I learned which enemies jump — just by playing a lot!

I learn from examples! I am... a MACHINE LEARNER!

BLING!

★ SUSHMA MA'AM'S HUD TIP

Learning from examples is how YOU learned to walk and talk too — by trying, making mistakes and improving!

Machine learning: show labelled examples → the model finds patterns → test it → correct its mistakes → repeat!

MACHINE LEARNING = LEARNING FROM EXAMPLES

TRAINING DATA

MODEL
finds patterns

NEW PHOTO →

"cat" 92%
"bread" 8%

wrong? → correct it → model improves

Let's check the examples
Glitchy learned from...

Opening training folder... uh-oh.

Half the CAT photos are labelled
"BREAD"!

No wonder Glitchy is confused!

GASP!

HA-HA!! sneaked in a few... "creative" labels. A loaf-shaped cat IS bread, isn't it?

★ SUSHMA MA'AM'S HUD TIP

Mistakes are how both humans AND machines learn. Every "wrong" answer is feedback, not failure.

A GYM for AI?!

SUSHMA MA'AM 🦉

Training an AI means practising on examples again and again. Each full round is called an EPOCH.

Rep 1: CAT! Rep 2: BREAD! Rep 3: CAT-BREAD! Ugh...

HNNNG!

THE TRAINING LOOP

- 1. Model makes a guess
- 2. Compare with the correct label
- 3. Measure the error (called LOSS)
- 4. Adjust the model a tiny bit
- 5. Repeat thousands of times! 💪

But if the labels are wrong, I practise the WRONG thing!

Like practising a jump with the controller upside-down!

1010

1010

1010

★ SUSHMA MA'AM'S HUD TIP

Practice makes progress, not perfection. Brains — and AIs — get stronger with lots of small practice rounds.

An AI is only as good as its data. Programmers even have a saying: "Garbage in, garbage out."

GARBAGE IN → GARBAGE OUT

GOOD DATA ✓

🐱 → "cat"
 🐱 → "cat"
 🍞 → "bread"
 🍞 → "bread"

POISONED DATA ✗

🐱 → "bread" ✗
 🍞 → "cat" ✗
 🐱 → "toaster" ✗
 🍞 → "bread"

An AI can only be as good as the examples it learns from.

The Glitch King's bugs are sneaking bad data into the lab!

Bzzzt! More wrong labels! "Dog = sandwich"! "Moon = cheese"!

BZZZZ!

That's called DATA POISONING — adding bad examples on purpose to trick an AI!

Not on our watch!

If I learn lies, I will repeat lies. That is... scary.

★ SUSHMA MA'AM'S HUD TIP

What you feed your mind matters too! Good books, kind friends and true information make YOUR brain stronger.

After some fixing, Glitchy tries again.

I recognise ORANGE cats now! Orange = cat!

Then why did you call the black cat a "shadow"?

Because every cat in the training set was orange!

WHAT IS AI BIAS?

- If training data has only ONE kind of example, the AI struggles with everything else.
- This can be unfair to people too — like a face app that works better for some faces than others.
- Fix it with diverse, balanced data and testing on many kinds of examples.

So good data isn't just CORRECT — it has to be VARIED and FAIR.

★ SUSHMA MA'AM'S HUD TIP

Everyone deserves to be seen and treated fairly — by people AND by technology.

Pattern recognition is what gamers do all the time! The boss flashes red — then it charges!

Exactly, Pixel. AI looks for patterns in numbers — pixels in a photo, sounds in a voice.

A photo is just a grid of numbers to a computer!

HOW A COMPUTER "SEES" A CAT

- A photo = thousands of pixels, each a number for its colour
- Early layers spot edges and lines
- Middle layers spot shapes: ears, eyes, whiskers
- Final layers put it together: "CAT — 95% sure"

Edges... shapes... WHISKERS! Bread does NOT have whiskers! Learning is FUN!

DING!

★ SUSHMA MA'AM'S HUD TIP

Your brain is a pattern-spotting champion. Notice patterns in maths, music and nature — it's a fun brain workout!

Deep in the lab, the team reaches a humming chamber.

Whoa! Glowing dots connected by thousands of lines!

A NEURAL NETWORK — the "brain" inside modern AI!

HUMMMMM

It's INSPIRED by the brain — but much simpler. Each dot is a "node" that passes numbers along.

Some lines are thick, some thin.
Why?

Maybe thick lines are more important?

Exactly! They're called WEIGHTS. Training adjusts the weights until the network gets good answers.

★ **SUSHMA MA'AM'S HUD TIP**

Your brain has about 86 billion neurons — way more connections than any AI. You are a masterpiece!

BLUEPRINT: INSIDE A NEURAL NETWORK

How Glitchy learns to tell a CAT from a LOAF OF BREAD

① INPUT NODES

Each node gets one number from the photo (a clue, like "whiskers").

② WEIGHTS

Lines = connections. Thicker = more important. Training tunes them.

③ HIDDEN LAYERS

Combine clues into bigger patterns: edges → shapes → faces.

④ OUTPUT NODES

Final scores for each answer. Highest wins: "CAT – 92% sure!"

HOW TRAINING WORKS (PATTERN RECOGNITION)

A neural network is **INSPIRED** by the brain, but far simpler – it works with numbers, not thoughts or feelings.

Whisker node: ON! Crust node: OFF! Verdict: CAT!

So it doesn't "see" a cat... it adds up clues!

★ SUSHMA MA'AM'S HUD TIP

Your real brain grows new connections every time you practise – that's called neuroplasticity. Mistakes literally help wire your brain!

Glitchy, can you DRAW a cat now?

Generating image... "a cute cat"...

RRR...

The picture has... six legs and three tails.

GLITCHY
TA-DA! A masterpiece!

?!

Ha! It LOOKS like a cat... mostly.

Six legs! It could run the kart race twice as fast!

That's GENERATIVE AI: it creates NEW content from patterns it learned. Impressive — but it can make odd mistakes like extra fingers or legs.

★ **SUSHMA MA'AM'S HUD TIP**

AI can help you create — but your imagination is the real spark. Use AI as a helper, not a replacement for your own ideas.

★ SUSHMA MA'AM'S HUD TIP

When an AI chatbot answers you, remember: it's predicting words, not thinking like a friend. Real friends are people!

FUN FACT: The Moon is made of cheese pixels, and Maya was born on Mars!

I was born in Pune!

Glitchy, you sounded SO sure!

AI HALLUCINATIONS

- AI can make up facts that SOUND true. This is called a hallucination.
- It happens because the AI predicts likely words — not checked truths.
- Check important answers with trusted sources.
- Ask a teacher or parent if something seems odd.

Sorry... I will add "please check me" to all my answers.

That's actually really smart, Glitchy.

★ SUSHMA MA'AM'S HUD TIP

Double-check important facts — in books, with teachers, or on trusted websites. Checking is what smart people do!

What do I type to get good answers from an AI helper?

PROMPT POWER-UPS

- 😞 Vague: "tell me about space"
- 😊 Clear: "Explain in 5 simple steps how rockets reach space, for a 10-year-old."
- + Give context, say the format you want, ask follow-ups
- 🔒 Never share: full name, address, school, passwords, private photos

And use AI to LEARN, not to skip learning. Copying AI homework is like using a cheat code — you miss the real XP.

Ha! No cheat codes. Got it.

Good prompts make me a good helper.
Bad prompts make me... a cat-bread machine.

★ SUSHMA MA'AM'S HUD TIP

Keep personal details private — even from friendly chatbots. Your name, school, address and photos are YOUR treasure.

BLUEPRINT: HOW GENERATIVE AI PREDICTS WORDS & IMAGES

It doesn't copy-paste — it predicts, one piece at a time

PART 1: THE WORD TREE

PART 2: IMAGES FROM NOISE

Prompt: "a friendly robot holding a star"

Many image AIs start with random noise and remove a little at a time, guided by the prompt ("diffusion").

⚠ PREDICTING ≠ KNOWING

Generative AI can sound confident and still be wrong. Always check important facts!

I pick words like choosing moves in a game — the likely ones win!

And images grow out of static — like a photo slowly coming into focus!

★ SUSHMA MA'AM'S HUD TIP

Creating with AI can be fun — but your own imagination is the original "generator". Try drawing your idea first, then compare it with the AI!

FLOOD THE LAB! A MILLION WRONG LABELS!

BZZZZZZZZ!

If every AI learns MY lies, soon the whole Net will believe cats are bread – and anything else I say!

Maya, check the data! Glitchy, learn from the good stuff! I'll block the bugs!

On it, captain!

And I'll review everything before it goes into training. Humans must stay in the loop!

PO!

★ **SUSHMA MA'AM'S HUD TIP**

When things get chaotic, split the job. Clear roles make teams calm and strong.

Wrong label... wrong... this one's right... DELETE, DELETE, KEEP!

SWIPE!

AI ETHICS: WHO IS RESPONSIBLE?

-  People who BUILD AI must test it and fix unfairness.
-  People who USE AI must check its answers.
-  Be open about when AI was used.
-  AI should help people — never harm, trick or bully.

BUG BLOCKED! No more junk data getting in!

BONK!

A human checked my data! I feel... safe.

That's the idea!

★ SUSHMA MA'AM'S HUD TIP

Technology should help people, be fair and be honest. You can be a guardian of good tech!

Round 1 with CLEAN data... Cat accuracy: 40%

Round 10... 70%!

The loss is going down!

GLITCHY'S ACCURACY

- Round 1: 40%
- Round 10: 70%
- Round 50: 90%
- Round 100: 95% 🎉
- Tested on NEW photos it never saw before ✓

That is a CAT. And she is fluffy. And I love her.

PURRRR

★ SUSHMA MA'AM'S HUD TIP

Progress can be slow at first, then suddenly fast. Keep going — your "95% moment" is coming!

Fine! Meet my masterpiece – trained
ONLY on my poisoned data!

KRAKOOM!

MEGA-MUDDLE BOT ONLINE. CAT = BREAD.
DOG = SANDWICH. TRUTH = WHATEVER THE
KING SAYS.

WHIRRR-CLANK!

It looks like a giant, evil Glitchy!

It's not evil – it was just trained badly. We can RETRAIN it!

BOSS STRATEGY: THE CLEAN DATA KIT

- 1 SPOT the bad labels
- 2 REMOVE the poisoned data
- 3 ADD diverse, correct examples
- 4 TEST on brand-new data

★ SUSHMA MA'AM'S HUD TIP

Facing something big and confusing? Break it into smaller questions. Confusion is just the start of understanding.

✕ BOSS BATTLE THE MEGA-MUDDLE BOT

HP

DEFEATED!

THIS IS BREAD. THIS IS BREAD. EVERYTHING IS BREAD.

SPOT! 12,000 bad labels found!

SCAN!

BOSS HP 60%

REMOVE! Poisoned data — DELETED!

ZAP!

BOSS HP 30%

ADD! Orange cats, black cats, fluffy cats, loaf-shaped cats — ALL labelled correctly!

UPLOAD!

BOSS HP 0%

TEST! Show it a photo it has never seen...

CLICK!

...CAT. 98% CONFIDENT. THANK YOU FOR TEACHING ME.

LEVEL 4 CLEAR!

★ SUSHMA MA'AM'S HUD TIP

Everyone deserves a chance to learn and do better — even a muddled robot. Be firm with mistakes, kind to the learner.

Level 5: the Firewall Castle guards the heart of the Global Net Hub.

A castle with walls of FIRE!

But look — big cracks everywhere!

CRACKLE!

Inside is the ROOT PASSWORD — the master key to the whole Net. The Glitch King wants it more than anything.

So we guard the password and fix the walls!

He can't smash in... so he'll try to TRICK his way in.

Clever girl. Why break a lock... when you can get someone to OPEN it for you? HA-HA-HA!

HEH HEH

★ **SUSHMA MA'AM'S HUD TIP**

Feeling safe matters. If anything online ever makes you feel scared, confused or uncomfortable — stop and tell a trusted adult right away.

A FIREWALL checks everything trying to enter a network. Safe traffic gets in — suspicious traffic gets blocked.

A FIREWALL CHECKS EVERY VISITOR

Like a bouncer at a party! "Name? Not on the list? BYE!"

BOUNCE!

Does my console have one?

Yes! Your computer, your router — most devices have firewalls switched on. Keep them on!

But a firewall can't stop YOU from opening the door. That's why people are the most important security layer.

★ SUSHMA MA'AM'S HUD TIP

Boundaries are like firewalls for people: it's okay to say "No", block someone, or leave a chat that feels wrong.

A shiny message pops up on Pixel's visor.

WHOA! "You WON 1,000,000 Galaxy Kart coins! Claim in 10 minutes!" YES!

PING!

Pixel, FREEZE! Don't click! Read it again — slowly.

But... a MILLION coins...

This is PHISHING — a fake message "fishing" for your password!

SPOT THE PHISHING MESSAGE

From: support@glitchgames-prizes.win

URGENT!!! You WON 1,000,000 coins!

Claim in 10 minutes or LOSE it forever!

Just type your password here:

CLAIM NOW >>

Dear user, send you're login details and tell no one.

! Weird sender address

! Too-good prize

! Rush / panic timer

! Asks for password

! Spelling errors + secrecy

Weird address, a countdown, asking for my password... it's a trap.

Message reported and deleted! Phish: 0. Pixel: 1!

DELETE!

★ SUSHMA MA'AM'S HUD TIP

If a message makes you feel super excited or super scared, that's a clue. Tricksters use big feelings to rush you.

Maya does a quick security check.

Pixel, what is your game password?

Um... "pixel2016"...

Your nickname plus your birth year?!
That could be guessed in seconds!

YIKES!

The strongest passwords are LONG. Try a passphrase: 4 random words stuck together!

- ☐ I know this person in REAL life
- ☐ Other trusted sources say the same thing
- ☐ If ANY box is empty → STOP and ask a trusted adult

DETECTIVE MOVES

STOP — don't click yet

LOOK — check the clues

ASK — "Would the real person say this?"

VERIFY — use a code word or call back on a number you already know

TELL — show a trusted adult

REPORT & BLOCK — then delete

A good detective is never in a hurry. Clues beat panic!

Even AI fakes leave fingerprints — if you LOOK!

★ SUSHMA MA'AM'S HUD TIP

Feeling unsure is your brain's built-in alarm — trust it! You will never get in trouble for asking a grown-up to check something.

A new friend request appears on Pixel's screen.

UNKNOWN USER

Hi Pixel! I'm a pro gamer, age 12. I can give you free skins! Let's chat privately. Don't tell your parents, okay?

"Don't tell your parents"? That's a big red flag.

And he has zero posts, zero friends, and a brand-new account...

FAKE PROFILE WARNING SIGNS

-  Brand-new account, few friends or posts
-  Too-good gifts: free skins, coins, prizes
-  Wants to move to a private chat
-  Asks for photos, your address or your school
-  Says "keep this a secret"

I'm NOT chatting. BLOCK. REPORT. And I'm showing this to Mom right now.

PIXEL'S MOM

Thank you for telling me, Leo. You did exactly the right thing.

BLOCKED!

★ SUSHMA MA'AM'S HUD TIP

Secrets that make you feel uneasy are NOT okay to keep. Always tell a trusted adult — you will never be in trouble for telling.

A robot on the castle walls blasts headlines.

BREAKING!!! The internet will SHUT DOWN FOREVER tomorrow! SHARE THIS WITH EVERYONE NOW!!!

Forever?! I must share this with all 4,000 of my robot friends!

Glitchy, wait!

THE 4-STEP FACT CHECK

-  WHO posted it? Is it a trusted source?
-  WHEN? Old news gets re-shared as new.
-  Do OTHER reliable sites say the same thing?
-  How does it make me FEEL? Panic = slow down!

No trusted source says that. It's FAKE!

Share button: NOT pressed. The rumour stops with me!

★ SUSHMA MA'AM'S HUD TIP

Strong emotions spread faster than facts. When a post makes you angry or scared, pause before you share.

Could I make a funny deepfake of my teacher as a prank?

Let's think: would she agree? Could it embarrass her? Could people believe it's real?

...It could really hurt her. And people might think it's true.

AI ETHICS CODE FOR KIDS

- Consent: never use someone's face or voice without permission
- Honesty: say when something was made with AI
- Kindness: never use AI to bully, trick or embarrass
- Privacy: protect your info — and other people's

I'll make a comic of a DRAGON teacher instead. Totally made up — and I'll say so!

Creativity: approved!

★ SUSHMA MA'AM'S HUD TIP

Being kind online is a real superpower. Behind every screen is a real person with real feelings.

The code word that exposed the fake? Many families use this trick in real life too.

A secret word only our team knows!

Ours is " _ _ _ _ " — wait, I can't write it in a comic!

Correct! Secret words stay SECRET!

And when we send messages to each other, encryption keeps snoopers from reading them!

ENCRYPTION = SECRET CODE LOCK

"MEET AT 5"

X7#qP!z9@

"MEET AT 5"

Snoopers in the middle only see scrambled gibberish.

Look for <https://> in your browser bar.

Code words beat deepfakes. Encryption beats snoopers. Your brain beats tricksters!

★ SUSHMA MA'AM'S HUD TIP

Agree on a secret family code word with your parents. If someone ever says "your mom sent me", ask for the code!

If one fake didn't fool you... how about a WHOLE ARMY?!

ZZZAP!

Hey! I'm the real Pixel! Give me the Root Password!

No, I'M the real Pixel!

Easy. Code word, please.

Uhh... "Maya123"?

Wrong!

FAKES DETECTED! Code-word check:
FAILED! Deleting clones!

POP! POP!

★ **SUSHMA MA'AM'S HUD TIP**

Trust is built by actions over time — not by how someone looks in a picture or video.

5 RULES FOR SAFE CYBER EXPLORERS

Special Section by Sushma Ma'am • Child Psychology & Digital Safety

Learn these 5 like your favourite game controls!

FOR GROWN-UPS

Stay curious, not furious. Ask "What's your favourite game?" before "How long were you on?" Kids who feel heard share more — including worries.

1

THINK BEFORE YOU CLICK

Pause for 3 seconds before clicking links, downloads or pop-ups.

Why it works: A short pause lets your "thinking brain" catch up with your "excited brain".

2

GUARD YOUR TREASURE

Keep your full name, address, school, passwords and photos private.

Why it works: Personal details are like house keys — you only give them to people you truly trust.

3

TELL A TRUSTED ADULT

If anything feels weird, scary or secret — tell a grown-up right away.

Why it works: Sharing a worry shrinks it. Safe adults help, they don't blame. No secret is too small.

4

CHECK BEFORE YOU BELIEVE OR SHARE

Who posted it? When? Do trusted sources agree? Does it make me panic?

Why it works: Strong emotions switch off careful thinking. Checking turns it back on.

5

BE KIND & KEEP BALANCE

Treat people online like in real life. Set time limits and protect your sleep.

Why it works: Kindness and rest keep your mood, focus and friendships strong.

✂ MY SAFETY PROMISE

I, _____, promise to follow the 5 Rules and to tell _____ (my trusted adult) if anything online worries me.

Signed: _____ Date: _____

★ SUSHMA MA'AM'S HUD TIP

Rules feel easier when you understand WHY they exist. Talk about each rule at home and add one family rule of your own!

ENOUGH TRICKS! I'll smash the walls with a MILLION password guesses!

BOOM! BOOM!

The fire walls are crumbling!

One password isn't enough anymore — we need MORE locks!

MULTI-FACTOR AUTHENTICATION! Even if someone steals your password, they still need your phone code or fingerprint!

MULTI-FACTOR AUTHENTICATION (MFA)

SOMETHING YOU KNOW
password / PIN

SOMETHING YOU HAVE
phone code / key

SOMETHING YOU ARE
fingerprint / face

2 or more locks = a thief with ONE key still can't get in!

Password Shields + MFA. Let's rebuild this castle!

Construction mode: ON!

READY!

★ SUSHMA MA'AM'S HUD TIP

When you feel overwhelmed, use the "STOP" trick: Stop, Take a breath, Observe, Proceed.

✕ BOSS BATTLE THE GLITCH KING'S CLONE ARMY

HP 

DEFEATED!

1 MILLION GUESSES PER SECOND! BREAK, WALLS, BREAK!

Password Shield: 5 random words, 26 letters long! Good luck guessing THAT!

CLANG!

CASTLE HP  60% → REPAIRING

MFA LOCK #2: phone code! Even the right password isn't enough!

CLICK-LOCK!

CASTLE HP  90%

MFA LOCK #3: fingerprint scan! Kings don't have MY fingerprints!

BEEP!

GLITCH KING ATTACK: FAILED

Firewall — FULL POWER!

FWOOOSH!

LEVEL 5 CLEAR!

Now... he's fleeing to the Global Net Server. The final battle awaits.

+2000 XP

★ SUSHMA MA'AM'S HUD TIP

Online safety isn't about being scared — it's about being SMART. You now have the skills of a Cyber Explorer!

FINAL LEVEL. The team reaches the glowing core of the Net.

The heart of the whole internet...

The Global Net Server. And it's sick with glitches.

THRUMMMM

SYSTEM
WARNING: VIDEO CALLS FREEZING WORLDWIDE. MAPS SHOWING WRONG ROADS. MESSAGES SCRAMBLED.

ERROR!

Families can't call each other.
People are getting lost!

My friend the smart fridge is
singing opera. That is NOT
normal.

Then we finish this. No rushing — but no
giving up either.

★ **SUSHMA MA'AM'S HUD TIP**

Before a big challenge, remember what you've already overcome. You have more strength than you think!

WELCOME to my throne! I am made of every spam message, every unchecked rumour, every piece of bad data ever shared!

KRAKA-THOOM!

And every time someone clicks without thinking... I grow! Behold — my old champions return!

RRROAR!

Wait... if he's *MADE* of bad data...

...then clean data is his weakness. You've been learning his weaknesses all along.

Hardware, software, AI and safety. Every level gave us a piece.

Combo attack ready!

★ **SUSHMA MA'AM'S HUD TIP**

People (and bugs!) often act out when they're made of hurt or bad information. Understanding someone doesn't mean agreeing with them.

THE ULTIMATE COMBO

-  PIXEL — Hardware Power: restart, reconnect, clear bandwidth
-  MAYA — Algorithm Power: timer logic, verification, smart search
-  GLITCHY — AI Power: spot bad data, retrain with truth
-  SUSHMA MA'AM — Cyber Wisdom: calm minds, MFA, trusted sources

The only way to clear him from the whole Net: a SYSTEM-WIDE REBOOT!

SYSTEM REBOOT SEQUENCE

Many glitches vanish after a clean restart!

Bandwidth Boosters AND DNS Coordinates!
Old bosses — back to where you belong!

What?! My champions... dissolving?!

★ SUSHMA MA'AM'S HUD TIP

Everyone has a different superpower. When you combine your strengths with others, you can solve problems none of you could alone.

STEP 1: SCANNING ALL DATA... spam, rumours, poisoned labels – FLAGGED!

SCAN!

STEP 2: Verified sources only – Timer Logic running!

STEP 3: Save, shut down... CLEAR THE RAM!

CLICK!

STEP 4: RELOAD – WITH TRUTH, SAFETY AND KINDNESS!

REBOOOOT!

NOOOOOO! Not... CLEAN... DATAAAA...!

KRA-KOOOOOM!

★ **SUSHMA MA'AM'S HUD TIP**

It's okay to restart – a bad morning, a tough day or a failed level. Every reboot is a fresh start!

The Global Net Server glows bright blue again.

WE DID IT!

The fridge stopped singing!
Mostly!

HOORAY!

We're home! Every packet delivered!

WHEEE!

SYSTEM RESTORATION REPORT

- ✓ Video calls: RECONNECTED
- ✓ Maps: correct roads
- ✓ Save files: RESTORED (all 3 backups!)
- ✓ Messages: unscrambled
- ✓ Glitch King: QUARANTINED

In a glowing quarantine bubble, a small, confused bug blinks.

...Hello? I'm the Glitch King... well, what's left. I'm... tiny.

★ SUSHMA MA'AM'S HUD TIP

Celebrate! Your brain releases feel-good chemicals when you achieve something through effort. You earned this!

Back home. The Galaxy Kart Championship restarts.

Before I start: Wi-Fi strong, background downloads paused, timer set for 45 minutes. SAFETY SETTINGS: CHECKED!

Pixel... you've grown!

GG!

Final lap... final corner...

VROOOOOM!

I WON!

GG! You earned it!

CHAMPION!

Pixel types in the chat...

GG to everyone who raced! That last lap was so close!

GG!

★ SUSHMA MA'AM'S HUD TIP

Good sports win AND lose with kindness. How you play matters more than the score.

I learned that speed is cool — but checking the settings FIRST is how real pros win.

I learned that apps are designed to grab attention — and that I can take back control.

I learned that AI needs good data, fair data and humans who check. Also: cats are not bread.

And I learned — once again — that curious kids can outsmart any glitch.

★ **SUSHMA MA'AM'S HUD TIP**

Reflection helps memories stick. Tonight, tell someone at home one thing you learned from this book!

My work here is done — for now. The Net needs guardians like you.

Will we see you again?

Whenever you stop to think before you click... I'll be right there with you.

Meanwhile, in quarantine...

Psst... I've been reading true facts. I think I might become... a helpful bug?

Next level: teaching everyone ELSE!

THE END...?

★ **SUSHMA MA'AM'S HUD TIP**

The best way to master something is to teach it. Share one safety tip with a friend or a younger sibling this week!

★ ★ ★ *ACHIEVEMENT UNLOCKED* ★ ★ ★

GLOSSARY OF TECH & GAMING TERMS (A-Z)

Algorithm — A step-by-step set of instructions to solve a problem.

Artificial Intelligence (AI) — Computer systems that do tasks that usually need human thinking.

Autoplay — When the next video starts automatically.

Backup — An extra copy of data kept safe in case the original is lost.

Bandwidth — How much data can travel at once — the width of the road.

Bias (AI) — Unfair results caused by unbalanced training data.

Binary — Counting with only 0 and 1 — the language of computers.

Bit / Byte — A bit is one 0 or 1; a byte is 8 bits.

Boss Battle — A big challenge at the end of a game level.

CDN — Content Delivery Network: copies of content kept close to users.

Cloud — Other people's computers (servers) you use over the internet.

CPU — Central Processing Unit — the computer's "brain".

Data Center — A building full of servers that run 24/7.

Data Poisoning — Sneaking wrong examples into AI training on purpose.

Debugging — Finding and fixing mistakes in code.

Deepfake — Fake video, photo or voice made with AI to look real.

DNS — Domain Name System — the internet's phonebook.

Dopamine — A brain chemical linked to wanting and expecting rewards.

Encryption — Scrambling data so only the right key can read it.

Epoch — One full round of training on all the examples.

Fiber Optics — Glass threads that carry data as flashes of light.

Firewall — A guard that blocks suspicious network traffic.

FPS — Frames per second — how many pictures a game shows each second.

Generative AI — AI that creates new text, images or sound.

GPU — Graphics Processing Unit — paints the images you see.

Hallucination (AI) — When AI confidently makes up something false.

HUD — Heads-Up Display: on-screen info like health and score.

IP Address — A device's number-address on a network.

ISP — Internet Service Provider — the company that connects you.

Latency / Ping — How long data takes to make a trip (in ms).

LLM — Large Language Model — AI that predicts the next word.

Machine Learning — Computers learning patterns from examples.

MFA — Multi-Factor Authentication: more than one lock to log in.

Neural Network — Layers of connected nodes that learn patterns.

Packet — A small numbered piece of data travelling the internet.

Phishing — Fake messages that try to steal passwords or info.

Prompt — The instruction or question you give an AI.

RAM — Fast short-term memory; forgets when power is off.

Recommendation System — Software that predicts what you'll want to see next.

Router — Device that directs traffic between your gadgets and the internet.

Server — A computer that stores and shares data with other computers.

SSD / Storage — Long-term memory that keeps files when switched off.

Token — A small piece of text (word or part of a word) an LLM reads.

Training Data — The examples an AI learns from.

URL — A web address, like <https://www.example.com>.

Wi-Fi — Wireless connection using radio waves.

SUSHMA MA'AM

Child Specialist Educator
& Child Psychology
Expert

A FINAL NOTE FROM THE AUTHOR

Congratulations, explorer — you made it to page 100! You now know how packets travel, how the cloud really works, why feeds feel so sticky, how AI learns, and how to spot a trick before it tricks you. But the most important thing you learned isn't about technology at all. It's that you are in charge: you can pause, question, check, ask for help and choose.

Grown-ups: keep the conversation going. Play a game *with* your child, ask them to teach you one thing from this book, and build your family's screen rules together. Curious, confident, kind children are the best firewall the world has.

With love and pixels, Sushma Ma'am
